

Moly Slip Copaslip 500G

If you couldn't get it apart, you probably should have used Copaslip when you put it together.

Molyslip Copaslip is an anti-seize compound consisting of finely divided copper and lead macro particles in a non-melt bentone base to which are added highly effective oxidation and corrosion inhibitors.

Copaslip won't soften or harden under extreme operating conditions. (operating range up to 2000 °F (1100 °C)).

Prevents metal-to-metal contact under all likely conditions so there is no danger of galling or metal pickup even under extreme pressures.

Highly effective corrosion inhibitors provide permanent protection against rusting & corrosion.

Moly Slic Grease 450G

- An all-purpose grease in an aerosol form
- Combines the advantages of a solid grease with those of a penetrating oil
- Fluid enough to be sprayed, won't flow or drain away
- High load capacity with molybdenum disulfide
- To reach hard to get at surfaces and mechanisms
- Servo systems
- Textile machinery
- Overhead cranes
- Bearings, throttle and carburetor linkages
- Office machinery and equipment
- Almost any point not fitted with a grease nipple or filler cap
