

RUBICON PRODUCTS

Rubicon Technology Inc. a provider of sapphire substrates, expects to lower its production forecast.

One customer, wireless-chip maker Peregrine Semiconductor Corp. (San Diego), has informed the company "that it will not take any additional shipments of sapphire products until further notice due to declining demand for its products."

Last month, Rubicon and Peregrine executed a revised contract which shifted the delivery of a portion of contracted volumes from 2008 to 2009 to accommodate Peregrine's inventory situation.

"However, recent demand reduction by Peregrine's customers related to the current global economic slowdown has resulted in this further action by Peregrine," according to Rubicon. "The remaining value of the current contract is approximately \$7 million; \$2 million was to be delivered in the fourth quarter of this year and the remaining \$5 million in the first half of 2009."

"Rubicon" DRIVER - No 107 Line Color screwdriver (Magnetic blade) Chrome -Vanadium blade Chrome Plated
